Acceptance Testing
UAT Execution & Report Submission

Date	08th March 2026
Team ID	EL2026TMID10104
Project Name	AI-Based Anomaly Detection Platform
Maximum Marks	4 Marks

1. Purpose of Document

The purpose of this document is to summarize the test coverage, execution results, and identified issues of the AI-Driven Healthcare Anomaly Detection System at the time of release for User Acceptance Testing (UAT).
This report provides an overview of:

- System verification performed during execution
- Defect identification and resolution status
- Test case execution results across different modules

The document helps stakeholders understand the quality, stability, and readiness of the system before final deployment or demonstration.

2. Defect Analysis

This section summarizes the **defects identified during the execution and verification phase** of the system. Issues were categorized according to severity levels and their resolution status.

Resolution	**Severity 1 (Critical)**	**Severity 2 (Major)**	**Severity 3 (Moderate)**	**Severity 4 (Minor)**	**Subtotal**
By Design	0	1	1	1	3
Duplicate	0	0	0	0	0
External	0	0	1	0	1
Fixed	0	1	2	3	6
Not Reproduced	0	0	0	0	0
Skipped	0	0	0	0	0
Won't Fix	0	0	0	0	0

Totals

Severity 1	**Severity 2**	**Severity 3**	**Severity 4**	**Total Defects**
0	2	4	4	10

3. Test Case Analysis

This report shows the number of test cases that have passed, failed, and untested

Section	Total Cases	Not Tested	Fail	Pass
Data Processing Module	7	0	0	7
Machine Learning Module	6	0	0	6
Dashboard Interface	8	0	0	8
Database Operations	5	0	0	5
Notification System	4	0	0	4
Exception Handling	3	0	0	3
Final System Output	4	0	0	4

Metric	Value
Total Test Cases	37
Passed	37
Failed	0
Not Tested	0

4. Conclusion

Based on the test execution and verification results, the **AI-Driven Healthcare Anomaly Detection System** is functioning as intended. All major modules—including data processing, anomaly detection, database storage, and dashboard visualization—were executed successfully.

No critical defects were identified during the verification phase. The system is considered **stable and ready for User Acceptance Testing (UAT)** and demonstration.
