

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	9 th march 2026
Team ID	EL2026TMID10104
Project Name	AI-Based Anomaly Detection Platform
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Brainstorm & idea prioritization

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

🕒 10 minutes to prepare
🕒 1 hour to collaborate
👥 2-8 people recommended

Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

🕒 10 minutes

A

Team gathering

Define who should participate in the session and send an invite. Share relevant information or pre-work ahead.

B

Set the goal

Think about the problem you'll be focusing on solving in the brainstorming session.

C

Learn how to use the facilitation tools

Use the Facilitation Superpowers to run a happy and productive session.

[Open article](#) →

1 Define your problem statement

What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.

🕒 5 minutes

PROBLEM

How might we [your problem statement]? **HMW Statement 1 (Clinical Focus):** How might we continuously analyze patient vitals in real-time to alert nurses of genuine anomalies before they become critical, without causing alert fatigue?

Key rules of brainstorming

To run a smooth and productive session

🗣️ Stay in topic.

💡 Encourage wild ideas.

👂 Defer judgment.

👂 Listen to others.

🗣️ Go for volume.

👁️ If possible, be visual.

Step-2: Brainstorm, Idea Listing and Grouping

2 Brainstorm

Write down any ideas that come to mind that address your problem statement.

10 minutes

Person 1

- Use Apache Kafka to create a continuous, real-time data streaming pipeline for vitals (Heart Rate, SpO₂, Temp, BP).
- Train an Autoencoder Neural Network to learn each patient's 'normal' baseline and detect subtle deviations.

Person 2

- Implement an Isolation Forest model to immediately flag sudden, extreme outliers in the data.
- Develop a web-based dashboard using Flask to visualize live patient data.

Person 3

- Classify anomalies into clear severity levels: LOW, MEDIUM, and HIGH.
- Trigger automated email notifications to administrators and doctors when a HIGH severity anomaly is detected.

Person 4

- Store all detected anomalies and patient data in a PostgreSQL database for historical review and audit logs.
- Implement color-coded alerts on the UI (e.g., Red for High, Yellow for Medium) so nurses can easily scan the room's status.

TIP
You can select a sticky note and hit the pencil button to sketch (don't start drawing!)

3 Group ideas

Take turns sharing your ideas while clustering similar or related notes as you go. Once all sticky notes have been grouped, give each cluster a sentence-like label. If a cluster is bigger than six sticky notes, try and see if you can break it up into smaller sub-groups.

20 minutes

Theme A: Data Ingestion & Storage: Idea 1 (Kafka Streaming), Idea 7 (PostgreSQL Database).

Theme B: Machine Learning & Analytics: Idea 2 (Autoencoder), Idea 3 (Isolation Forest), Idea 5 (Severity Classification).

Theme C: User Interface & Alerting: Idea 4 (Flask Dashboard), Idea 6 (Email Notifications), Idea 8 (Color-Coded UI).

TIP
Add customizable tags to sticky notes to make it easier to find, browse, organize, and compare important ideas as themes within your team.

Step-3: Idea Prioritization

4 Prioritize

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible.

20 minutes

Importance
If each of these tasks could get done without any difficulty or cost, which would have the most positive impact?

Feasibility
Regardless of their importance, which tasks are more feasible than others? (Cost, time, effort, complexity, etc.)

TIP
Participants can use their cursors to point at where sticky notes should go on the grid. The facilitator can confirm the spot by using the laser pointer holding the H key on the keyboard.
